

HKSTP x Amgen Co-incubation Programme

Embracing Ageing for a Better Tomorrow

By 2030, one in six people will be 60 years old or above. The quest for scientific innovations and healthcare solutions for aging diseases is urgent across the world.

The co-incubation programme combines the funding and state-of-the-art facilities provided by the HKSTP Incu-Bio Programme with expert strategic development coaching from global biopharmaceutical company Amgen to provide all-round support to biotech startups focusing on all age-related diseases such as cardiovascular disease and bone disease.

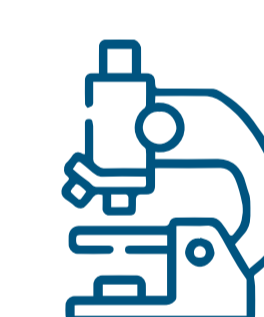

Maximise your potential to fight one of the most pressing healthcare challenges in Asia and beyond.

Join us in revolutionising elderly care, and to make ageing a better experience for all.
